

Speed, Distance and Time

Two open-weight illustrations + code-rendered formulas

Subject Mathematics

Grade Grade 6

Topic Speed, Distance & Time

Lesson Learning Outcomes

2 min

By the end of the lesson, the learner should be able to:

- a) Explain what speed means in everyday life.
- b) Use the relationship between speed, distance and time.
- c) Solve simple problems to find speed, distance or time.

Speed in real life

Speed on the track

A cyclist covering distance

Key formulas

SPEED

$$v = \frac{d}{t}$$

DISTANCE

$$d = v \times t$$

TIME

$$t = \frac{d}{v}$$

Worked example

A car travels $d = 120$ km in $t = 2$ hours. Its speed is $v = \frac{d}{t} = \frac{120}{2} = 60$ km/h.

Assessment Questions

5 min

- a) Write the formula for speed.
- b) A cyclist covers 30 km in 3 hours. Find the speed $v = \frac{d}{t}$.
- c) If $v = 50$ km/h and $t = 4$ hours, find the distance $d = v \times t$.
