

The Water Cycle

How water travels around our world — again and again

Subject Science

Grade Two

Time 40 min

Topic Earth & Water

What we will learn

Name the **5 steps of the water cycle** and explain how the **sun** keeps water moving — up to the sky and back down again.

Understand

See the whole journey

The **sun** warms the sea (☀️ evaporation), plants add vapour (🌳 transpiration) → it cools into **clouds** (☁️ condensation) → rain falls (🌧️ precipitation) → water runs to rivers & seas (🌊 collection) → and the sun starts it **all over again!**

The 5 steps

Your turn — think & answer

What makes water rise into the sky?

The sun's heat (evaporation).

What are clouds made of?

Tiny water droplets (condensation).

Name one kind of precipitation.

Rain, snow or hail.

Remember!

🌍 Water is never lost — it just keeps travelling around the water cycle, forever. Keep our water clean! 💙
