

The Breathing System

Grade 5 Lesson Plan

Learning Area Science and Technology

Strand Living things and their environment

Sub Strand The Breathing System

Year 2026

Administrative details

SCHOOL	DATE	TERM
TIME	ROLL (BOYS / GIRLS / TOTAL)	TEACHER'S NAME
GENDER	TSC NO.	

Lesson Learning Outcomes

2 min

By the end of the lesson, the learner should be able to:

- a) Identify the main parts of the human breathing system from a chart.
- b) Describe the functions of each part of the human breathing system to peers.
- c) Appreciate the need for maintaining a healthy breathing system for a healthy living.

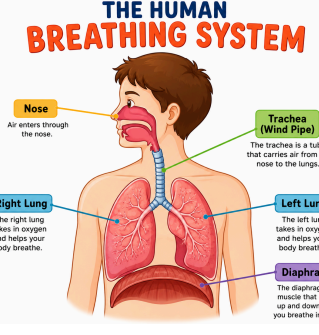

Key inquiry question

- How does the breathing system help us stay alive?
- What makes up the human breathing system?

Learning resources

- Chart, Model of the breathing system
- Pictures of lungs and nose
- Balloons
- Flashcards
- Textbook (Indicate the title and page, both the teacher's and the learner's book)
- An internet enabled digital device

The Breathing System

THE HUMAN BREATHING SYSTEM

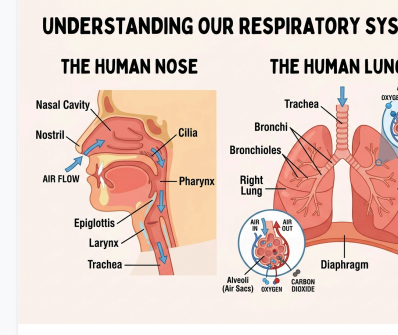

Nose
Air enters through the nose.

Trachea (Wind Pipe)
The trachea is a tube that carries air from the nose to the lungs.

Right Lung
The right lung takes in oxygen and helps your body breathe.

Left Lung
The left lung takes in oxygen and helps your body breathe.

Diaphragm
The diaphragm is a muscle that moves up and down to help you breathe in and out.

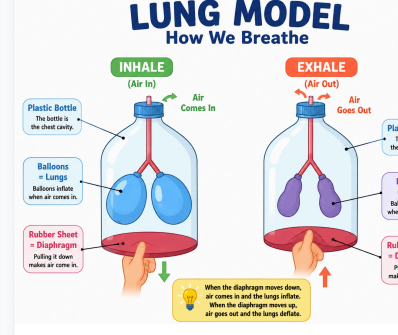

UNDERSTANDING OUR RESPIRATORY SYSTEM

THE HUMAN NOSE

Nasal Cavity
Nostril
Cilia
AIR FLOW
Pharynx
Epiglottis
Larynx
Trachea

THE HUMAN LUNGS

Trachea
Bronchioles
Right Lung
Left Lung
Diaphragm
Avalon (Air Sack)
Avalon (Air Sack)
Avalon (Air Sack)
Avalon (Air Sack)

LUNG MODEL
How We Breathe

INHALE (Air In)
Plastic Bottle - The bottle is the chest cavity.
Balloons - Lungs. Balloons inflate when air comes in.
Rubber Sheet - Diaphragm. Pulling it down makes air come in.

EXHALE (Air Out)
Plastic Bottle - The bottle is the chest cavity.
Balloons - Lungs. Balloons deflate when air goes out.
Rubber Sheet - Diaphragm. Pushing it up makes air go out.

When the diaphragm moves down, air comes in and the lungs inflate. When the diaphragm moves up, air goes out and the lungs deflate.

Chart, Model of the breathing system

Pictures of lungs and nose

Balloons

Introduction

Learners are guided to carry out an activity on breathing in and out. They will then respond to oral questions about the body parts that help in breathing.

LESSON DEVELOPMENT

18 min

1

Step 1
Learners are guided to study the chart on human breathing system. They will then explain the functions of the nose, trachea (wind pipe), lungs and the diaphragm. This will nurture the core competency of learning to learn and creativity and imagination.

2

Step 2
Learners are guided to discuss in groups on how to label the parts of the human breathing system. This will develop the core value of love and respect as the learners use etiquette in their discussion.

3

Step 3
Learners are guided to search from a digital device the ways of maintaining a healthy breathing system. This will nurture the core competency of digital literacy.

Conclusion

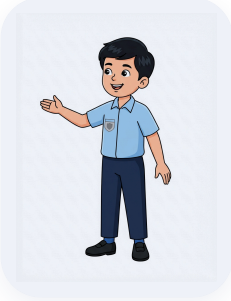

Learners are guided to respond to oral questions on how to keep their breathing system healthy. This will nurture the PCI of safety as learners mention aspects such as avoiding smoking.

Assessment Questions (to be captured in the teacher's notes)

5 min

- a) Name 4 parts of the human breathing system
- b) What is the work of the lungs
- c) Why is the nose important in breathing
- d) State 2 ways of keeping the breathing system healthy

Extended Activity

Learners to draw and label the human Breathing System in their exercise books and write 3 ways of caring for it.
