

The Water Cycle

How water travels around our world

ID wc-001

Subject Science

Grade Four

Class 28

Time 40 min

Type Concept — Earth & Water

Objectives

2 min

- Students will name the five steps of the water cycle: evaporation, transpiration, condensation, precipitation, collection. Remember
- Students will explain that the sun's heat drives the whole cycle. Understand
- Students will trace water's journey on a simple diagram, in the correct order. Apply

Resources & Support

Resources

- Water-cycle diagram on the board
- A clear glass jar, warm water, a small plate, and 3–4 ice cubes (mini demo)
- Five step cards: Evaporation · Transpiration · Condensation · Precipitation · Collection

Target words

- evaporation · transpiration · condensation · precipitation · collection

Teacher note — gestures

Wiggle fingers upward for evaporation (rising vapour), flutter fingertips up from an open palm for transpiration (a leaf letting go of water), cup hands together for condensation (a cloud forming), flutter fingers downward for precipitation (rain), and rest both palms flat for collection (water gathering in rivers and seas).
