

The Water Cycle

Water's journey in 5 steps — every step a real photo

Subject Science

Grade Four

Class 28

Time 40 min

Type Concept · Earth & Water

Objective

2 min

Students will name the **five steps of the water cycle** and explain that the **sun** drives water's endless journey.

Understand

The five steps — real photos

10 min

1

Evaporation

The sun heats water in seas and rivers — it rises as invisible vapour.

2

Transpiration

Plants release water vapour into the air through their leaves.

3

Condensation

High in the cool sky the vapour turns back into droplets and forms clouds.

4

Precipitation

Clouds grow heavy and water falls as rain, snow or hail.

5

Collection

Water gathers in rivers, lakes and seas — ready to rise again.

☞ ...then the sun heats the collected water again, and the cycle never stops.

Trace the journey on the diagram

12 min

The **sun** heats water in the sea (**evaporation**) and **plants** add vapour from their leaves (**transpiration**) → the vapour rises and cools into a **cloud** (**condensation**) → the cloud grows heavy and **rain** falls (**precipitation**) → water runs into rivers and seas (**collection**) → and the sun starts it all over again.
